

REGENERATING

Facial wash cream

The formula is enriched with Shea butter, hyaluronic acid and Gardenia stem cell extract, so the skin is delicately cleansed and well hydrated. The cleansing cream leaves behind a pleasant feeling of soft, smooth and fresh skin. It effectively prepares skin for the next steps - to take the necessary active ingredients from the subsequent cosmetic product.

Stem cell extract – regenerates withered and sagging facial skin, enhances collagen synthesis and slows down the aging process.

Hyaluronic acid – a natural skin component, it has an extraordinary ability to retain water nearly a thousand times more than its own weight. What is used in REFAN's products is the branched-chain hyaluronic acid (cross-linked hyaluronic acid), which due to its structure has a high water-absorbing capacity, similar to high-molecular hyaluronic acid, but much more stable to enzymatic degradation and with easier penetration into the skin. Branched-chain hyaluronic acid is well known as a skin filler. Dermatologists inject it directly into the skin to physically fill in wrinkles from within. Many consumers do not like this invasive and expensive approach and therefore look for cosmetic products that imitate the properties of dermal fillers. REFAN uses exactly this type of hyaluronic acid.

Shea/Karite butter is the most suitable ingredient to provide us with the necessary moisture and nutrients during the cold season. It is rich in trace elements and fatty acids - oleic, stearic, palmitic and linolenic acids. They are necessary to preserve moisture in the skin, to maintain elasticity and regulate lipid synthesis in depth.

Use: Apply onto moistened skin of face, neck and décolleté. Massage gently, then rinse with water.
