

HYDRATING

Day face cream

Hydrating face cream with diamond powder, hydrolyzed collagen, hyaluronic acid and vitamin E. A combination of ingredients that permanently hydrate facial skin, give elasticity and smooth fine lines.

Diamond powder - deeply hydrates and improves skin comfort, by brightening and refreshing it.

Hyaluronic acid – a natural skin component, it has an extraordinary ability to retain water nearly a thousand times more than its own weight. What is used in REFAN's products is the branched-chain hyaluronic acid (cross-linked hyaluronic acid), which due to its structure has a high water-absorbing capacity, similar to high-molecular hyaluronic acid, but much more stable to enzymatic degradation and with easier penetration into the skin. Branched-chain hyaluronic acid is well known as a skin filler. Dermatologists inject it directly into the skin to physically fill in wrinkles from within. Many consumers do not like this invasive and expensive approach and therefore look for cosmetic products that imitate the properties of dermal fillers. REFAN uses exactly this type of hyaluronic acid.

Collagen - improves skin elasticity and reduces fine lines. It forms a flexible network that gives elasticity and strength to the skin.

Vitamin E – it is widely used in cosmetics due to the strong protective functions it performs. Improves epithelization and increases enzyme activity in the skin. It slows down the processes of skin premature aging caused by UV radiation, by showing antioxidant properties and reducing the number of damaged cells. It has an anti-inflammatory and hydrating effect.

Use: Apply onto thoroughly cleansed skin and massage until it is fully absorbed.
