

REGENERATING

Day face cream

It takes care of skin during the day, protecting it from harmful UV rays. The formula is enriched with hyaluronic acid and gardenia stem cell extract. The combination of the above ingredients is an effective means of smoothing fine lines and wrinkles. It erases imperfections and gives freshness to the skin.

Stem cell extract – regenerates withered and sagging facial skin, enhances collagen synthesis and slows down the aging process.

Hyaluronic acid – a natural skin component, it has an extraordinary ability to retain water nearly a thousand times more than its own weight. What is used in REFAN's products is the branched-chain hyaluronic acid (cross-linked hyaluronic acid), which due to its structure has a high water-absorbing capacity, similar to high-molecular hyaluronic acid, but much more stable to enzymatic degradation and with easier penetration into the skin. Branched-chain hyaluronic acid is well known as a skin filler. Dermatologists inject it directly into the skin to physically fill in wrinkles from within. Many consumers do not like this invasive and expensive approach and therefore look for cosmetic products that imitate the properties of dermal fillers. REFAN uses exactly this type of hyaluronic acid.

Use: Apply onto thoroughly cleansed skin and massage until it is fully absorbed.
